

LOUDSPEAKERS - SUB BASS

MEYER MM-10 POWERED MINI SUB WOOFER

Features:

- Powerful low-frequency response from a very small cabinet
- Low distortion affords exceptionally clean bass

Applications:

- Background music
- Small theatres
- Portable AV Systems
- Compact voice reinforcement systems

The MM-10 miniature subwoofer delivers expanded low frequency for applications that require excellent audio quality from a compact system. Designed primarily as a companion to Meyer Sounds MM-4XP miniature loudspeaker, as well as the UP-4XP ultracompact loudspeaker, both with IntelligentDC technology, the MM-10 allows system designers to create full-range systems where space limitations are a concern.

The MM-10 features an operating frequency range of 33 Hz to 228 Hz with a conservatively rated maximum peak SPL of 123 dB. The MM-10 bass reflex cabinet houses a single 10-inch driver and a single-channel power amplifier complete with onboard processing, including a crossover, driver protection, and frequency and phase correction. The built-in crossover accepts full-range signals, facilitating basic daisy-chaining for signal distribution, eliminating the need for external crossovers in small setups.
