LOUDSPEAKERS

d&b audiotechnik E5 LIGHTWEIGHT LOUDSPEAKER

The E5 is a lightweight 2-way passive loudspeaker using a ferrite LF driver and a coaxially mounted wide dispersion dome tweeter. It offers a wide symmetrical dispersion pattern in the horizontal and vertical plane while the cabinet may be mounted in either attitude. The E5 is intended for mobile near field applications for speech and music reinforcement in theatres, conferences, industrial presentations, broadcast studios and as surround sound, delay and fill systems. It can be used stand-alone or supplemented by different subwoofers from the E-Series. The highly compact bass-reflex enclosure is injection moulded with an impact resistant black paint finish. The loudspeaker cabinet is weather protected and suitable for outdoor use as standard.

The E5 can be driven by either the d&b D6 or D12 dual channel power amplifiers configured for the E5.
