LOUDSPEAKERS - SPM

YAMAHA MSP3 SELF POWERED MONITOR

The MSP series has become the new standard in reference monitors, and is now augmented by a new, compact member: the MSP3. Although compact in size, the MSP3 faithfully delivers the high-quality reference sound you expect from the MSP series, and is an ideal choice not only for the small private studio or post-production setup, but also as a monitor for electronic musical instruments or surround reproduction.

The MSP3 employs a two-way bass reflex design featuring a 10-cm woofer and a 2.2-cm tweeter. It also has a built-in power amp thats optimized for the speaker units to ensure clear, natural reference sound. Although the built-in amp puts out a hefty 20 watts of power, the MSP3 weighs only 4.4 kilograms for easy portability and placement.
