

LOUDSPEAKERS - LINE ARRAY

FLARE AUDIO X2A SPEAKER

Compact Vertical Point Source Array

By combining Vortex TM and Space TM Technologies with compact size the X2A delivers the same reference quality sound for smaller installations and live performance events. The X2A is a prime example of how Flares technologies have been utilised to optimum effect with over 200 Vortex TM ports coupled with the compression of Space TM technology. The partnership of these technologies means that no colorations is added to the sound, focussing instead on allowing the original material to show through, creating the perfect engineers tool.

The X2A measures only 250mm x 435mm x 170mm and can be used on its own or in a vertical array of up to 20 boxes with various tilt options: 0 degree -2.5 degree -5 degree -7.5 degree -10 degree. The speaker features the same signature aluminium and birch ply as the X5A. Suited for a multitude of applications from corporate AV to live performance, the X2A delivers stunning clarity and aesthetics.

Features:

- Superior sound quality
- Compact size
- Modular flying system
- Single unit or column array with various tilt angles
- Space Technology TM
- Vortex Technology TM
