LOUDSPEAKERS

FLARE AUDIO X0A SPEAKER BLACK (with A/B input selector)

Compact Vertical Point Source Array

The superior vocal clarity of the X0, coupled with its small size (193mm x 150mm x 78mm) and flexible bracketery allows for maximum sound design flexibility. The X0 can be used on its own as a delay or low level installation speaker, or can be arrayed in a Vertical Point Source.

With the highest level of sound accuracy available, the combined system is a refined tool for engineers and sound designers. Using Space TM and Vortex TM technologies, the X0 allows sound to be produced with a minimum of interferences from box pressure and resonance. The purity of sound provides a platform for expression allowing engineers to work with the sound created by the artist, not the loudspeaker.

Features:
• Superior sound quality
• Compact size
• Modular Flying System
• Single unit or column array with various tilt angles
• Space Technology
• TM Vortex Technology TM
