LOUDSPEAKERS

KV2 EX15 ACTIVE LOUDSPEAKER

3-Way Active Loudspeaker

The New EX15 introduces a three way design to the successful EX loudspeaker range. Incorporating a unique coaxial 15 inch transducer with a 1.75 inch Nitride Titanium Compression Driver, while many coaxial speakers struggle in their attempt to cover the entire frequency range, the EX15s coaxial driver is only required to deliver the low and high frequencies. This leaves the all important mid range to a dedicated horn loaded 6 inch neodymium speaker, allowing the 15 inch to deliver accurate and deep bass, an area in which it excels, rather than trying to also reproduce a compromised mid range above its natural frequency window for optimum speed and dynamic musical performance. The EX15s unique approach, featuring 1000W of dedicated Tri-amplified electronics, provides an extremely natural, truly full range sound from a compact yet powerful package that out performs many speakers twice its size.

Features:
• Unique coaxial 15• transducer with a 1.75• Nitride Titanium Compression Driver on a wide dispersion horn covering low and high frequencies 6• neodymium speaker mounted on a large 80 x 60 degree horn covers mid range 1000W of dedicated Tri-amplified electronics Compact Three way Full range solution Extremely natural full range sound from a compact yet powerful package, that out performs many speakers twice its size
Applications:
• Theatre Conference House of worship Fixed installations Stage monitoring Small to medium scale concerts
