IN EAR MONITORING

SHURE P9HW HARDWIRED IEM RECEIVER

Features:
• Rugged, all-metal construction
• LCD screen with menu-based navigation
• Easy to adjust volume knob and mix control
• Two input channels with MixMode technology or stereo mode output
• Volume limiter sets the maximum volume adjustment range
• 4-band parametric EQ
• Switchable line (+4 dBu) and aux (-10 dBV) input level
• 2 AA batteries provide up to 9 hours of use
• Power and battery status LED
• Power-save mode and automatic power-off preserves battery life

The P9HW is a wired, two-channel stereo personal monitor with individual mix controls.

It delivers improved audio clarity and reduced feedback onstage versus traditional speaker wedges. Listen to one or two channels of audio from the mixing console through earphones, using MixMode technology to customize the mono blend or stereo mode to set the left/right balance. A four-band EQ and volume limiting further individualize the sound.

Two standard AA batteries provide up to 9 hours of continuous use. With a compact and rugged aluminum body, the P9HW ensures a long lifetime of use and easily clips onto a belt or guitar strap. Y-splitter cable included for connection to audio sources.
