COMMUNICATIONS - WIRED

RIEDEL PUNQTUM Q110 BELT PACK

Features:
• Plug and Play
• Powered by any PoE source (Switch/Injector)
• Daisy-chain an unlimited number of belt packs
• Audio replay of missed calls (up to 30s)
• No master station needed
• Supports industry standard headsets (4-Pin)
• Works with any IP switch
• Talk/Listen to any 2 out of 32 partylines
• 2 configurable “Talk-to-many“ channels
• Flexible configuration
• Choose 1 out of 4 program inputs
• Operate 4 out of 32 GPIO outputs
• Talk to max. 4 PA channels
• Offline configuration software (Win/Mac)

The easy-to-use and ergonomic Q110 Beltpack offers two channels of partyline intercom and is packed with many useful features: power can be supplied via standard PoE switch or from our speaker station, beltpacks are daisy-chainable to up to eight units on a single network connection and you can even replay missed comms like voice-mail. It’s the perfect solution for improved team communication during events from small to large.

Get it out and get things done. There is no time on site. That’s why the plug & play concept of the Q110 beltpack will be your favourite. Just get it out of its box, plug it into a network and start communicating. Quick.

You don’t want to study a manual explaining features you probably would never use in the first place. You want your gear to get going. So we strapped the beltpack down to what is necessary. No gimmicks, no fancy decorations. Just the tool. Quintessential.

Colleagues are working side by side? Daisy-chain their beltpacks and save long cable runs. Easy.
