

COMMUNICATIONS - WIRELESS

HOLLYLAND 4 WAY SOLIDCOM C1 PRO RADIOCOMMS SYSTEM

The Solidcom C1 Pro is a fully wireless, full-duplex intercom system designed for seamless team communication — no belt packs, no cables, just crystal-clear audio. Whether you're coordinating a live production, managing an event, or operating a complex AV setup, the Solidcom C1 Pro delivers dependable, high-quality communication with effortless setup and operation.

Optional Hub Integration

The Solidcom C1 Pro functions flawlessly as a standalone system, but adding the optional hub brings a host of advanced capabilities. It allows seamless integration with existing 2-wire or 4-wire communication systems, enabling teams to merge legacy infrastructure with modern wireless flexibility. The hub also enables the creation of separate A and B user groups, making it easy to segment communication channels for different roles or departments. A "Voice of God" feature lets a designated headset override and mute all other users, ideal for announcements or urgent instructions. For larger operations, the system can be expanded to support up to 27 headsets by linking three hubs together via a wired Ethernet connection.

Exceptional Audio Quality

The Solidcom C1 Pro features advanced dual-mic Environmental Noise Cancellation (ENC) technology to ensure clear audio, even in loud or chaotic settings. The primary directional boom microphone focuses on the user's voice, while a secondary omnidirectional mic captures background sound from the environment. These signals are processed using sophisticated ENC algorithms, effectively filtering out ambient noise and delivering high-intelligibility communication. Additionally, the boom mic includes physical shielding

to minimize wind interference, providing reliable audio performance indoors or out.

User-Friendly Design

Operating the headsets is simple and intuitive. Users can mute or unmute themselves by simply raising or lowering the microphone boom. For those who prefer traditional operation, a push-to-talk button is conveniently located on the earcup. The system's audio clarity makes it easy to distinguish individual voices, offering a significant improvement over standard walkie-talkies and other basic communication tools.

Flexible Power Options

Each headset is powered by a compact lithium-ion battery, keeping the total weight under 170 grams for maximum comfort during extended use. The master headset provides over 5 hours of runtime, while remote headsets can operate for over 10 hours on a single charge. Swapping batteries is quick and easy, and a low battery warning is clearly indicated by an LED on the boom arm.

Kit comprised of the following:

4 x All in One Headset
1 x Base station
1 x Charger Hub

Keys Features:

- Easy to Setup
- Up to 300m Line of Slight range
- ENC Noise Cancelling
- PTT Function
- Advanced DECT 6.0 1.9ghz technology
- Clear quality full duplex audio for all users
- Simple mute function
- Up to 10 hours battery life
- Useful side tone
- Adjustable volume
