MIDI

MIDI SOLUTIONS POWER ADAPTER / LINE DRIVER

MIDI Solutions Power Adater

The Power Adapter provides power to MIDI Solutions products in instances when it is not available or where a large number of MIDI Solutions products are being chained in series. The Power Adapter has an optically isolated MIDI In, a MIDI Thru, and a power connection for a 9V (AC or DC) wall adapter. It's possible to power up to 20 MIDI Solutions products from the Power Adapter's single Thru output. The Power Adapter can also be used in a transmitter/receiver configuration to send MIDI over long distances.
