MICROPHONES

SHURE BETA87A SUPERCARDIOID CONDENSER MICROPHONE

The Shure Beta 87 is a premium quality supercardioid hand-held condenser vocal microphone with exceptionally smooth frequency response and high sound pressure level capability. It is ideal for a professional lead or backing vocalist either on stage, for live recording or in the studio.

The Beta 87 features a controlled low-frequency roll-off that compensates for proximity effect and prevents the boomy0 sound often associated with close pick-up. The tailored frequency responce with its presence rise , brightens the upper midrange and helps the vocals cut through the mix. The tight supercardioid pattern provides maximum isolation from other vocalists or instruments while offering minimal off-axis coloration. It operates on phantom power
