MICROPHONES

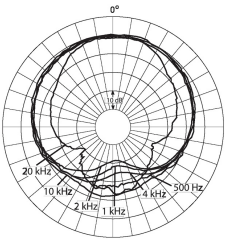

DPA 4022 COMPACT CARDIOID CONDENSER MIC

Features:
- Uniquely natural and realistic sound
- Handles extremely high sound pressure levels
- Precise and detailed reproduction

Applications:
- Theatre
- Conference
- Cinema
- Rock n Roll
- Live Event
- Theme Parks
- Houses of Worship
- Leisure Facilities
- Voice Evacuation
- Stadiums

The DPA Compact Cardioids are phantom powered (P48) condenser microphone using the same type of cartridge as the famous DPA 4011, but is preamplified using a built-in ultra-small thick-film mounted FET-preamplifier. The result is the worlds smallest studio quality cardioid condenser microphone, which runs directly on phantom power with no external preamplifier needed. The 4022 has a rear-mounted cable for situations where the microphone needs to be suspended from its own cable or mounted on a stand.
